SUMMARY

Product designer with nearly two years of shipped product work across EdTech, AI SaaS and Web3. I own flows end to end: framing the problem, mapping journeys and edge cases, designing in Figma, building design systems, and staying with engineers until it ships. A Computer Science degree lets me prototype in code and hand off designs engineers can build without guesswork. Looking for one product team to commit to and grow with.

EXPERIENCE

Cybersecurity Training Consultancy, Singapore (NDA) | Lead Product Designer **Apr 2026 – Present**
Long-term contract, Remote | Figma, User Flows, Role-Based UX, Design Systems, Prototyping

- Sole product designer on a new EdTech platform, reporting to the founder: a courses LMS plus a corporate training and consulting site.
- Designed separate Admin, Trainer and Student experiences on role-based access, so each role sees only the tools and data it needs.
- Designed the purchase-to-learning journey end to end: catalog, booking, checkout, enrollment, progress and completion rewards.
- Designed a self-serve publishing tool so the team ships blogs, whitepapers and service pages without a developer.
- Also built the platform (Next.js, TypeScript, PostgreSQL), so the shipped product matches the Figma file.

EasyHyr (AI-Powered ATS and Job Finder) | Product Designer **Jan 2026 – Mar 2026**
Contract, Remote, US client | Figma, Onboarding, AI Product UX, Email Design

- Designed onboarding, profile sections and job listings for job seekers.
- Created a distinct visual treatment for AI-generated content, so users can tell AI suggestions apart from their own data.
- Designed a transactional email for every edge case in the journey, not only the happy path.

DQN.red and Bango.fun (Founder-Led Startups) | Design Lead **Feb 2025 – Nov 2025**
Full-time, On-site, Pune, India | Figma, Framer, Design Systems, Brand Identity, Prototyping
Same founder throughout, moving to each new venture after launch; re-hired in 2026 for Kira brand packaging.

Bango.fun (Prediction Market for Micro-Communities) | Design Lead **Jul 2025 – Nov 2025**
Product Redesign, Brand Identity, Onboarding, UI System

- Led the relaunch redesign and brand identity, and shipped two production versions of the interface; the product won a $10K Avalanche Retro9000 grant.
- Simplified market and prediction flows for non-crypto users, with social login in place of wallet-first onboarding.
- Turned the brand into one UI system across web and mobile, including a color-coded waitlist and onboarding flow.

DQN.red (Web3 Collectibles and Community Platform, Avalanche) | Design Lead **Feb 2025 – Jun 2025**
Design Systems, Interaction Design, Checkout UX

- Joined when only the homepage existed; designed the full product: profiles, quests, leaderboard, shop and limited-drop claim flows.
- Built a component-based design system with transaction-aware states (pending, signing, failed), so new quests and drops reused existing components.
- Designed a checkout that let users pay in two tokens or a mix, with one order summary that kept totals clear.
- Launch: $300K+ organic presale, 6,000 active community users and 30K+ new followers on X.

Earlier: OnwE and a Stealth Hiring Startup | Backend Developer Internships **Jun 2024 – Feb 2025**
Node.js, Express, PostgreSQL

SKILLS

- **Product Design:** User Flows, Journey Mapping, Interaction Design, Wireframing, Prototyping, Design Systems, Edge and Error States, Accessibility (WCAG), Design Handoff, Brand Identity
- **Design Tools:** Figma, Framer, Rive, Affinity, Generative AI Tools
- **Working with Engineering:** HTML, CSS, React, Next.js, TypeScript, Tailwind CSS, Design Tokens, Git

EDUCATION AND AWARDS

Parul University, Vadodara | B.Tech, Computer Science and Engineering, CGPA 8.67/10 **Nov 2021 – May 2025**
Awards: 2nd Place, Arweave Hacker House #1 (Dec 2023, lead designer) | Track Winner, Agentic Ethereum Hackathon (Feb 2025)
